

Viasat Brings Fastest Home Satellite Internet Service to Mexico

December 11, 2019

New Viasat Residential Service Expected to Provide Connectivity Even in the Hardest-to-Reach Areas of Mexico where Terrestrial Services are Currently Not Available

MEXICO CITY, Dec. 11, 2019 /PRNewswire/ -- [Viasat Inc.](#) (NASDAQ: VSAT), a global communications company, announced today the availability of reliable, high-speed, high-quality internet service for residential customers in Mexico. Customers will be able to subscribe to a home satellite internet service with speeds in select areas up to 50 Megabits per second (Mbps), enabling them to enjoy online access to social media, streaming content, video call services, sending/receiving emails and using unlimited chat and web browsing.

Viasat has established itself as a trusted, credible satellite internet provider. The Company has successfully deployed its Community Wi-Fi hotspot service across the country, using satellite-enabled Wi-Fi hotspots to deliver affordable internet service to remote communities that previously had little or no internet connectivity. Viasat has also collaborated with local partners in Mexico on the 'Internet para Todos' program, connecting government buildings, federal clinics and schools to the internet over Viasat's satellite systems. Additionally, Viasat has been contracted by Aeroméxico to bring high-speed in-flight connectivity to a portion of the airline's commercial fleet.

"There are still millions of people within Mexico that are without access to a high-quality, reliable broadband internet connection—we're here to change that," said Lisa Scalpone, vice president of Latin America Residential Services at Viasat. "We are excited to help close this digital gap in Mexico and connect people to everything the internet has to offer. Our new internet service offerings are priced right for the Mexican consumer and will offer the fastest connections with dependable service quality to meet their everyday online needs."

Viasat's residential plans in Mexico

Viasat's new residential internet service for Mexico uses bandwidth from the ViaSat-2 satellite—the world's most advanced high-capacity communications satellite. The service is launching today in select areas and will be rolled out across the country in early-2020. Plans will have download speeds up to 50 Mbps in certain areas—the fastest satellite internet speeds available in the country. In addition, Viasat's Mexico residential plans are competitively priced, and include unique features, such as:

- Unlimited chat and browsing
- Unlimited night zone usage from 2:00 am to 7:00 am local time
