

## Viasat Receives Landmark Validation of Supplemental Type Certificate for In-Flight Connectivity System on Airbus A320 Aircraft in China

April 13, 2022

CARLSBAD, Calif., April 13, 2022 /PRNewswire/ -- [Viasat Inc.](#) (NASDAQ: VSAT), a global communications company, today announced it has been awarded a Civil Aviation Administration of China (CAAC) Validation of Supplemental Type Certificate (VSTC) to install its complete, advanced Ka-band satellite system on Airbus A320 series of aircraft. This CAAC validation, Viasat's first in China, lays the foundation for Chinese airlines to install and deploy Viasat's industry-leading In-Flight Connectivity (IFC) system, including antenna, radome, modem, server and WAPs, on Airbus A320s.

The CAAC VSTC was awarded based on an Airbus A320 STC previously certified by the European Union Aviation Safety Agency (EASA). It joins a portfolio of STCs that has been applied globally on 1,800+ commercial aircraft installed with Viasat's in-flight connectivity system. In total, the Company's current IFC solution has accumulated more than 16.5 million flight hours.

Don Buchman, Viasat's vice president and general manager, Commercial Aviation, stated, "Achieving the CAAC validation milestone in China is significant because Chinese-based airlines, using our best-in-class equipment, are now a step closer to delivering an on-the-ground internet experience to their passengers while in-flight. We're grateful to our partners in China for their support and are committed to continuing to invest in this important market -- where we have operated since 1994 -- for the long run."

Viasat's IFC system will enable full video streaming, browsing, messaging, social media scrolling and more to every connected device on a Viasat-equipped aircraft. In addition to optimizing passengers' connected experiences when in-flight, Viasat's IFC solution will enable airlines to enhance passenger loyalty, improve operating efficiencies and increase revenue generating opportunities through ancillary content and application programs.

### Forward-Looking Statements

This press release contains forward-looking statements that are subject to the safe harbors created under the Securities Act of 1933 and the Securities Exchange Act of 1934. Forward-looking statements include Viasat's ability to install and deploy the IFC system on Airbus A320s; and benefits to airline customers and passengers. Readers are cautioned that actual results could differ materially and adversely from those expressed in any forward-looking statements. Factors that could cause actual results to differ include: risks associated with the construction, launch and operation of satellites, including the effect of any anomaly, operational failure or degradation in satellite performance, contractual problems, product defects, manufacturing issues or delays, regulatory issues, changes in relationships with, or the financial condition of, key suppliers, and technologies that do not perform according to expectations; technologies not being developed according to anticipated schedules, or that do not perform according to expectations, and increased competition and other factors affecting the aviation sector generally. In addition, please refer to the risk factors contained in Viasat's SEC filings available at [www.sec.gov](#), including Viasat's most recent Annual Report on Form 10-K and Quarterly Reports on Form 10-Q. Readers are cautioned not to place undue reliance on any forward-looking statements, which speak only as of the date on which they are made. Viasat undertakes no obligation to update or revise any forward-looking statements for any reason.
