

Viasat Announces the Next Evolution of its Award-Winning L-Band Tactical Satellite Service (L-TAC)

Aug 14, 2024

Enhanced scalability and on-demand service will offer global mobile users rapid service activation for tactical beyond line-of-sight communications

CARLSBAD, Calif., Aug. 14, 2024 /PRNewswire/ -- [Viasat, Inc.](#) (NASDAQ: VSAT), a global leader in satellite communications, today announced the next evolution of its award-winning L-band tactical satellite service, L-TAC, delivering new features that allow service on-demand – when and where users need it. The [L-TAC](#) service is delivered through Viasat's [worldwide L-band network](#), connecting radio users and command centers worldwide using the tactical radios' native waveforms, encryption and a secure terrestrial network.

The newly evolved L-TAC solution will automate the service's ordering and provisioning system and deliver an automated L-TAC channel assignment capability for more effective resource allocation. This solution features a web portal that will allow end users or Viasat partners to order or schedule L-TAC service. This enhanced capability will enable users to request and receive service on-demand in specific beams and over geographic regions when and where they need to operate. As a result, global government customers can order immediate service to areas of operation and can schedule their resources more efficiently.

Furthermore, U.S. government customers now also have access to a radio frequency over Internet protocol (RFoIP) solution that supports remote monitoring of L-TAC channels. This enables L-TAC user nets, or radio nets, to be remotely accessed worldwide over IP, connecting users back to their headquarters, forward operating bases or other remote sites.

Government and military users have traditionally relied on line-of-sight Ultra High Frequency (UHF), Very High Frequency (VHF) and UHF SATCOM systems for tactical communications without practical alternatives when those services are unavailable. The Viasat L-TAC service provides this alternative and is complementary to existing UHF, VHF and UHF TACSAT radios, allowing users to leverage the same security-accredited equipment with advanced encryption over L-band satellite connections via interoperable waveforms.

"Our award-winning L-TAC solution is a trusted option for tactical, beyond line-of-sight communications with thousands of units deployed. We recognize that our government customers' missions and requirements are always evolving so it is our responsibility to never stop innovating to meet those needs," said Susan Miller, President, Viasat Government. "This latest evolution of L-TAC is in direct response to users' feedback. It further enhances the capabilities available to our customers, while also delivering the flexibility, ease-of-use and implementation that today's warfighters expect."

For years, users around the world have trusted the L-TAC solution to deliver a combination of reliable voice and data connectivity, providing a robust and flexible beyond line-of-sight (BLOS) capability to support missions in the air, at sea and on land. The L-TAC service is actively supporting global operations for several nations' armed forces around the world and a civilian alternative is available for police, fire and medical support services, emergency services, aid agencies, embassy communications and other civilian agency use.

About Viasat

Viasat is a global communications company that believes everyone and everything in the world can be connected. With offices in 24 countries around the world, our mission shapes how consumers, businesses, governments and militaries around the world communicate and connect. Viasat is developing the ultimate global communications network to power high-quality, reliable, secure, affordable, fast connections to positively impact people's lives anywhere they are—on the ground, in the air or at sea, while building a sustainable future in space. In May 2023, Viasat completed its acquisition of Inmarsat, combining the teams, technologies and resources of the two companies to create a new global communications partner. Forward-Looking Statements

This press release contains forward-looking statements that are subject to the safe harbors created under the Securities Act of 1933 and the Securities Exchange Act of 1934. Forward-looking statements include, among others, statements that refer to the features, benefits and performance of the L-band tactical satellite service (L-TAC) solution. Readers are cautioned that actual results could differ materially from those expressed in any forward-looking statements. Factors that could cause actual results to differ include: our ability to realize the anticipated benefits of the Viasat global L-band GEO satellites and any future satellite we may construct or acquire; risks associated with the construction, launch and operation of satellites, including the effect of any anomaly, operational failure or degradation in satellite performance; our ability to successfully develop, introduce and sell new technologies, products and services; changes in the global business environment and economic conditions; changes in relationships with, or the financial condition of, key customers or suppliers; our reliance on a limited number of third parties to manufacture and supply our products; the effect of adverse regulatory changes (including changes affecting spectrum availability or permitted uses) on our ability to sell or deploy our products and services; changes in the way others use spectrum; our inability to access additional spectrum, use spectrum for additional purposes, and/or operate satellites at additional orbital locations; competing uses of the same spectrum or orbital locations that we utilize or seek to utilize; introduction of new technologies and other factors affecting the communications and defense industries generally. In addition, please refer to the risk factors contained in our SEC filings available at [www.sec.gov](#), including our most recent Annual Report on Form 10-K and Quarterly Reports on Form 10-Q. Readers are cautioned not to place undue reliance on any forward-looking statements, which speak only as of the date on which they are made. We undertake no obligation to update or revise any forward-looking statements for any reason.
